Description

Soothing cream indicated for hypersensitive, reddened skin with a tendency to couperose. Eliminates skin redness and refreshes giving a prompt feeling of well-being. It balances, soothes, restructures and determines a rapid aesthetic improvement of the epidermal conditions. Contains hypericum extract and unsaponifiable liposome of Karité and Corn, capable of performing an effective soothing and normalizing action. By refreshing and protecting the epidermis, it relieves erythema caused by intense sun exposure.

How to use: the application is recommended in the morning, after having thoroughly cleaned and toned the skin, since sensitive and easy-to-blush skin reacts badly to sunlight. Gently spread the cream on face and neck. The daily use of Sensitive Skin and Couperose Cream prevents the formation of redness. Easily absorbed, it is an excellent make-up base.
